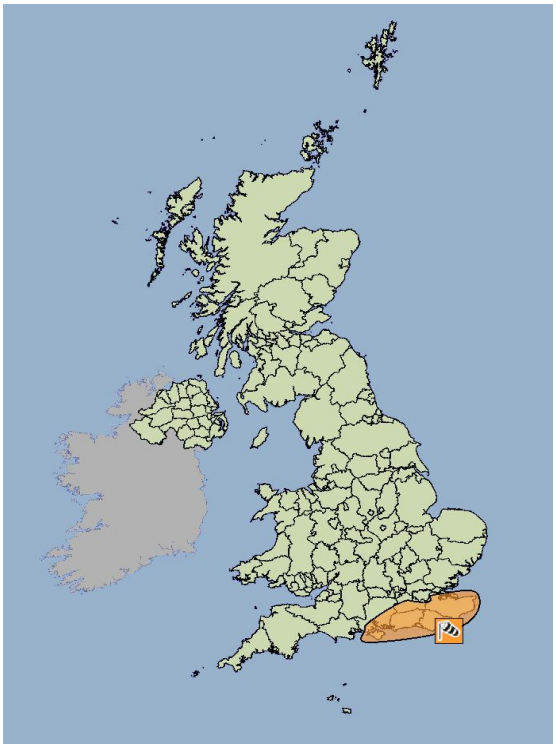
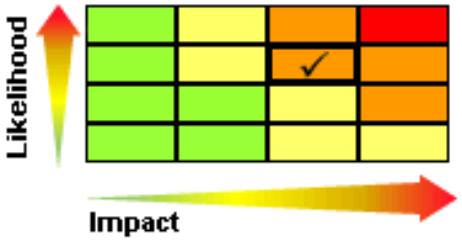
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure is rapidly deepening to the southwest of the UK later on Sunday and will run northeast across England and Wales overnight and into Monday, bringing some very strong winds, large coastal waves and heavy rain.

Though some uncertainties remain in the exact track of the low and thus timings and locations of strongest winds, there is now greater confidence of a period of very strong and gusty winds, even inland, across parts of south east England on Monday morning.

The Met Office have issued an **Amber Warning** of **Wind**

Valid from **01:15 on Mon, 28th Mar 2016** until **12:00 on Mon, 28th Mar 2016**

Very strong southerly winds will develop across southern England from the early hours of Monday, eventually veering westerly before clearing by late morning. The risk of disruption looks to be highest across parts of the south east from Hampshire and the Isle of Wight eastwards to Sussex, Surrey and Kent. Gusts of 60 to 70 mph are likely at times, particularly along the south coast.

This warning identifies an area where medium-level impacts are most likely within the broader yellow warning already covering southern England and parts of South Wales. Please be prepared for disruption to outdoor activities and travel, as well as the likelihood of fallen trees and temporary interruptions to power supplies.
